FDA Committee of Food Labeling

Subj: Labeling of trans fats on labels.

I feel that the fats should be broken down and listed on the labels of the foods we eat. Please do not listen to the lobbyists of the food industry. I personally feel that the food industry is raping the American Public in regards to healthful foods. When is the last time you have seen an ad for a pear, peach, apple on TV. It seems it must be coated with chemicals, additives etc. for it to be placed before the public.

At least give us the right to read what we are about to purchase. I wish that you also would have placed the percent of fat in a serving in addition to the weight on the label that you now have. Trans fats would be an aid to help determine how the fat is broken down.

Just wanted to voice my opinion.

Thank You,

Larry L. McClean
